Legal

Skinner is © 2002-2004 79bmedia GmbH.

We put every effort into making sure that *Skinner* works reliably, and we are not aware of any bugs or problems in *Skinner* that are not listed in this manual. Nonetheless, due to the application's nature, we need to point out that you use *Skinner* on your own risk.

System requirement

This version of *Skinner* supports the Treo 600. Skinner 1.x supports the Treo 270 and the Treo 300 and is available at *Skinner*'s homepage.

Installation

Install the file *skinner.prc*.

If you are updating *Skinner* to a newer version, please make sure to disable the previously installed version of *Skinner* on your handheld before updating, otherwise the new version will not be installed. The same applies when you want to remove *Skinner* from your handheld.

You will need to also install skins and/or carrier logo files. Use the ones that come with the download or download more skins and carrier logos at <http://www.79bmedia.com/skinner>.

Usage

After having installed *Skinner*, a new icon will be visible in your launcher. Launching *Skinner* will open the main screen, where you can enable/disable *Skinner* and select a skin to be used for the Treo 600's phone application as well as a carrier logo set.

Skinner will stay enabled after a soft reset automatically.

Skins

Three skins are included in *Skinner*'s distribution file (Essentials Aqua 1.0 by Derek Kelly from treo600essentials.com, XP and Winter), additional skins can be downloaded from *Skinner*'s homepage at <http://www.79bmedia.com/skinner>.

To delete a skin, select it in *Skinner* and choose “Delete skin” from the menu.

To delete a carrier logo, select it in *Skinner* and choose “Delete carrier logo” from the menu.

To create your own skins or carrier logos, please use the Skinner Desktop application included in the Skinner distribution download. Skinner Desktop requires a Windows PC. To create a new skin, it is recommended to “Export” the default skin to get a set of files with the right dimensions. These files can now be changed by you in Photoshop or other applications. Afterwards you can use the “Import” function of Skinner Desktop to get all files into Skinner Desktop at once.

Troubleshooting

We recommend to only use skins available in the distribution zip-file or on our website, i.e. skins that were tested by us. In case of problems, please contact us at skinner@79bmedia.com.

Damaged skins or carrier logos can cause your device to soft reset at boot time, which could lead to an endless series of resets. If this should ever happen, you can stop the reset loop by doing a warm reset and remove the skin in question. Afterwards a soft reset will be necessary.

A warm reset can be done by pressing and holding the Page Up button on your Treo. While holding, use the reset tip to make a reset. Continue to hold the Page Up button pressed until you see the device logo (Palm Platform logo). More details about resets can be found at <http://www.palmone.com/us/support/helpnotes/hardware/resets.html>.

Contact

In case of questions regarding, please contact skinner@79bmedia.com in either English or German language. We will reply to your mail within two business days.
