Operation

### Welcome to SprayPaint

This is a program that lets you customize the look and feel of your handheld device. The settings you apply here are global, so pretty much all applications are affected unless they have specific code overriding the global palette. There is one level of undo for all color operations with the exception of Restore Defaults. It cannot be undone.

### Operation

Just tap in one of the color swatches and a color Picker dialog will come up. The color you choose will be updated right away and you should see your changes reflected in the example box on the bottom of each page. We added a whole bunch of pre-configured themes that you can use to create your own.

In addition you can now save your settings as Custom Themes. To save your current settings as custom theme just edit the title and tap the save button. The menubar will then reflect the title of your custom theme.

### **Restore Defaults**

Restore Defaults sets your handheld device back to its regular look and feel. You know, the slightly boring blue and white stuff.

### **Categories**

User Interface items are grouped into the categories Objects, Menus, Forms, Fields and FEP ( text entry available on some Asian devices). The example boxes at the bottom of each screen show how objects are affected.

### **Safety and Deleting**

This program is not a Hack and perfectly safe to use. If you wish to delete SprayPaint from your device, you might want to consider doing a Restore Defaults. Otherwise your device will continue using the selected color theme.

### **Concluding**

We had a great time creating this application and believe that it can be very useful. We might, however, not have thought of everything or maybe there is a feature you'd like to see in a future release. If so, let us know ;)
